Matter 5: Crushed Rock

9. Should separate landbanks be maintained for limestone crushed rock and igneous crushed rock (high quality polished stone value)? (See PPG ID 27-066-20140306)

YES BECAUSE THERE IS LESS HIGH PSV ROCK THAN LIMESTONE

12. Should Preferred Areas and/or Areas of Search be identified for crushed rock overall, and/or for limestone and/or igneous rock? Please give reasons.

YES. FOR CARBONIFEROUS LIMESTONE, MSAs COVER MOST OF THE RESOURCE. AREAS OF SEACH SHOULD BE CONFINED TO THESE.
